

BUSINESS REQUIREMENTS DOCUMENT TEMPLATE

PROJECT DETAILS

PROJECT NAME		
Save for Later Feature Implementation for an Online Grocery Delivery Platform		
CREATOR		
Aayush Saini		
DOCUMENT NO.	DATE	VERSION NO.
BRD-001	17 th June 2026	1.0

1. EXECUTIVE SUMMARY SNAPSHOT

Provide an executive summary (overview of your business requirements) here. Your executive summary should be a "snapshot" of the purpose of your business requirements, including a brief description of any analysis, findings, project details, scope, business drivers, proposed process, current process, and functional requirements. An executive summary provides an overview of a larger document or of research and is usually the first thing your reader will see. Here are the questions you should answer when writing your business requirements executive summary:

- What is the goal (purpose) of this business requirements document (BRD)?
- Who is the audience for this business requirements document?

The purpose of this Business Requirements Document (BRD) is to define the business requirements for implementing a **Save for Later** feature in an Online Grocery Delivery Platform. The feature will enable customers to save products they intend to purchase in the future, improving convenience, customer engagement, and purchase conversion.

Currently, customers who discover products of interest but are not ready to purchase must either remember the items or search for them again during future visits. This limitation leads to lost purchase intent, reduced customer retention, and missed sales opportunities.

The proposed solution introduces a dedicated Save for Later functionality that allows customers to save, manage, and revisit products across multiple sessions. The feature will also allow customers to move saved products directly to their shopping cart, providing a seamless shopping experience.

This document is intended for the Product Manager, Business Analyst, Development Team, QA Team, and other project stakeholders responsible for planning, developing, and validating the solution.

2. PROJECT DESCRIPTION

In this section, describe the project for which you are writing this business requirements document. Describe the project's purpose, what the current process/solution is for the project, what the challenges are, and why you need to undertake the project.

The Online Grocery Delivery Platform provides customers with the ability to browse products, place grocery orders, and manage their shopping experience digitally.

Customer behaviour analysis indicates that many users discover products they wish to purchase but postpone their buying decision. Since the platform currently lacks a dedicated Save for Later feature, these products are often forgotten, requiring customers to search for them again during future visits. This creates friction in the shopping journey and contributes to lower customer engagement and conversion.

The objective of this project is to design and implement a Save for Later feature that allows customers to save products for future purchase. The feature will improve customer convenience, encourage repeat visits, increase engagement, and support business growth through higher conversion of saved products into completed purchases.

3. PROJECT SCOPE

Provide a high-level description of the project's scope, including a list of project-specific goals, tasks, deliverables, costs, deadlines -- everything that is "in" and "out" of scope for the project. This information provides team members with guidelines for the scope of the project, so they can plan and resource accordingly.

The scope of this project is to design and implement a **Save for Later** feature for the Online Grocery Delivery Platform. The feature will allow authenticated customers to save products for future purchase, manage their saved items, and seamlessly move them to the shopping cart. The project aims to improve customer experience, increase engagement, and enhance conversion rates while integrating with the platform's existing shopping workflow. Features outside the core Save for Later functionality are excluded from the current release.

IN-SCOPE ITEMS	OUT-OF-SCOPE ITEMS
Item 1: Customers can save products for future purchase.	Item 1: AI-powered product recommendations
Item 2: Customers can view all saved products in a dedicated Save for Later page.	Item 2: Shared Wishlist between multiple users.
Item 3: Customers can remove products from the saved list.	Item 3: Price-drop notifications for saved products.
Item 4: Customers can move saved products directly to the shopping cart.	Item 4: Product reservation or inventory locking.
Item 5: Display product details such as name, image, category, and current price within the saved list.	Item 5: Social media sharing of saved products.
Item 6: Synchronize saved products across customer login sessions.	Item 6: Personalized recommendation engine based on saved items.

4. BUSINESS DRIVERS

Enter the reasons (i.e., business drivers) why your business is initiating the project. In short, Why are you undertaking the project? Examples might include the following: legal requirements, cost savings with a more efficient practice, updated import/export laws, improved efficiency, improved sales, etc.

Business Driver 1: Improve Customer Retention

The current platform does not provide customers with a way to save products they intend to purchase later. As a result, many customers forget previously viewed products, reducing the likelihood of returning to the platform. Implementing a Save for Later feature will encourage repeat visits and improve long-term customer retention by allowing users to easily revisit products of interest.

Business Driver 2: Increase Purchase Conversion

Customers often discover products they are interested in but postpone their purchasing decision. Without a mechanism to save these products, potential sales opportunities are lost. The Save for Later feature enables customers to preserve their purchase intent, increasing the probability that saved products will eventually be converted into completed purchases.

Business Driver 3: Enhance Customer Experience

Providing customers with the ability to save products for future purchase creates a more convenient and personalized shopping experience. It reduces the effort required to rediscover products during subsequent visits, resulting in a smoother customer journey and higher user satisfaction.

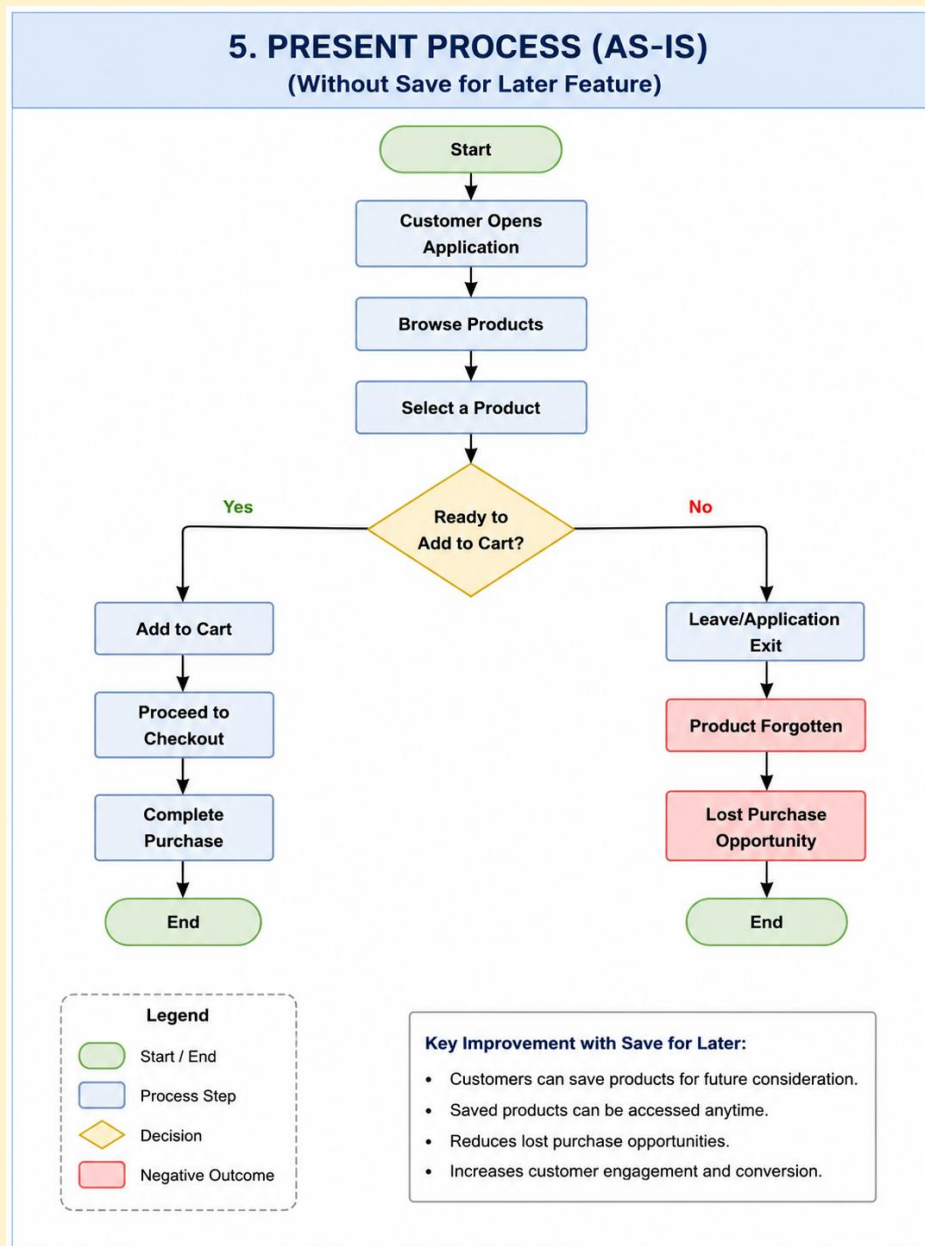

Business Driver 4: Support Revenue Growth

By increasing customer engagement and improving the conversion of saved products into completed purchases, the feature contributes to higher sales opportunities and long-term revenue growth. The implementation also strengthens customer loyalty, which can positively influence repeat purchasing behavior.

5. PRESENT PROCESS

Provide details of your current, prevailing process for addressing the primary issue your project attempts to solve. Feel free to include diagrams, flowcharts, or other visuals to illustrate the current process.

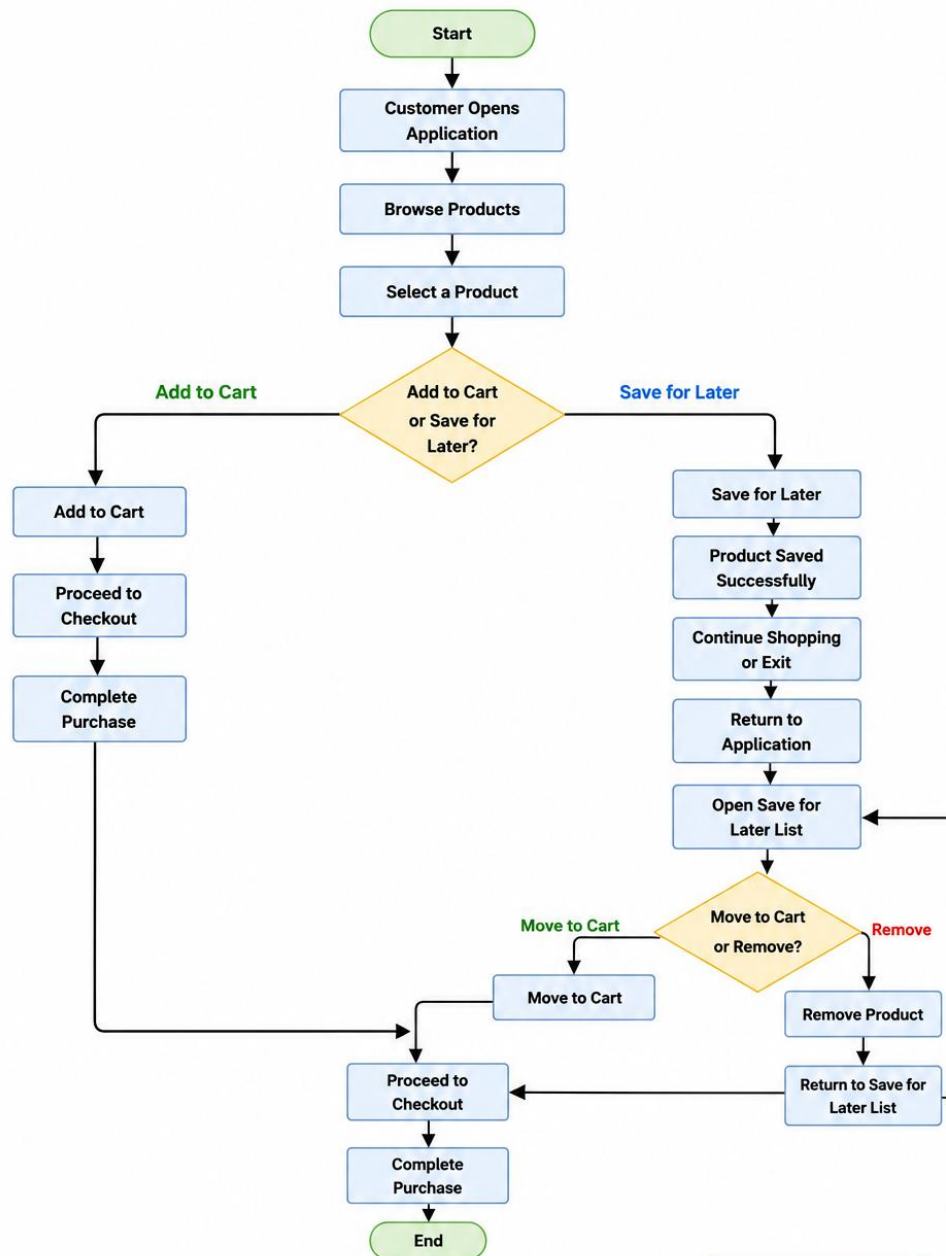

Currently, the Online Grocery Delivery Platform allows customers to browse products, add items directly to the shopping cart, and complete purchases. However, customers who are interested in a product but are not ready to purchase immediately do not have an option to save it for future consideration. As a result, customers must either remember the product manually or search for it again during a future visit. This creates unnecessary effort, interrupts the shopping experience, and increases the likelihood of customers abandoning their purchase intent. Consequently, the platform experiences reduced customer engagement, lower product revisit rates, and missed revenue opportunities.

6. PROPOSED PROCESS

Provide details of the proposed process for addressing the primary issue your project attempts to solve. Feel free to include diagrams, flowcharts, or other visuals to illustrate the proposed process. For this process, we recommend that you use the same illustrative tool/style that you used for your present/current process (above).

6. PROPOSED PROCESS (TO-BE) (With Save for Later Feature)

Key Improvements with Save for Later:

- Customers can save products for future consideration.
- Saved products can be accessed anytime.
- Reduces product search effort on future visits.
- Increases customer engagement and conversion opportunities.

Legend

- Start / End
- Process Step
- Decision
- Flow Direction

7. FUNCTIONAL REQUIREMENTS

Detail the project's functional requirements by enumerating the ways in which the current process addresses the issue and by describing the functional requirements necessary to make the project successful.

The functional requirements described in this document define the capabilities that the proposed **Save for Later** feature must provide to meet the project's business objectives. These requirements specify the expected behaviour of the system from the user's perspective and establish the baseline for solution design, development, testing, and validation.

Each requirement has been assigned a priority based on its importance to the successful implementation of the Minimum Viable Product (MVP). The priority classification helps the project team determine implementation order and ensures that critical business functionality is delivered within the project scope.

The detailed functional requirements are presented in the following sections, where each requirement is assigned a unique identifier, implementation priority, and business owner.

– PRIORITY

Use the following priority table. It allows you to apply a ratings system to your requirements, so you have the visibility (into the value, status, and description of each requirement) that is necessary for determining whether a particular requirement is essential to project success.

VALUE	STATUS	DESCRIPTION
1	Immediate	The requirement is critical to the project's success. Without fulfilling this requirement, the project is not possible.
2	High	The requirement is high priority re the project's success, but the project could still be implemented in a minimum viable product (MVP) scenario.
3	Moderate	The requirement is important to the project's success, as it provides value, but the project could still be implemented in an MVP scenario.
4	Low	The requirement is of low priority, but the project's success is not dependent upon it.
5	Prospective	The requirement is out of the project's scope and is included as a possible component of a prospective release and/or feature.

– CATEGORIES (RC1)

In this section, detail the project's functional use; break down your project's requirements into categories so that they're easy to understand. You can duplicate this section for any successive project categories as needed. The following table includes a unique ID for each requirement, the details of each requirement, the priority of each requirement, and the name of the person who is driving or is responsible for the requirement. Include descriptions of how the current process addresses the issue. Also include the functional requirements necessary to achieve success.

ID	REQUIREMENT	PRIORITY	RAISED BY
FR-001	The system shall allow authenticated customers to save products for future purchase.	1	Product Manager
FR-002	The system shall display a confirmation message after a product is successfully saved.	2	Business Analyst
FR-003	Customers shall be able to access all saved products from a dedicated Save for Later page.	1	Product Manager
FR-004	Customers shall be able to remove products from their saved list.	2	Product Manager
FR-005	Customers shall be able to move saved products directly to the shopping cart.	1	Product Manager
FR-006	Products moved to the shopping cart shall be removed from the Save for Later list automatically.	1	Development Team
FR-007	The system shall display product details including image, name, category, price, and availability within the saved list.	2	UX Designer
FR-008	The system shall prevent duplicate entries of the same product in the Save for Later list.	2	Development Team
FR-009	The Save for Later list shall remain synchronized across customer login sessions.	1	Product Manager
FR-010	The system shall display an informative empty-state message when no products have been saved.	3	UX Designer
FR-011	Customers shall be able to continue shopping immediately after saving a product.	3	Business Analyst
FR-012	The system shall maintain the latest product price and availability information for all saved products.	2	Development Team

8. NON-FUNCTIONAL REQUIREMENTS

Detail all non-functional requirements (NFRs) of the project, including such things as features, system behavior, and project characteristics that relate to user experience.

ID	REQUIREMENT
NFR-001	The Save for Later feature shall load within 2 seconds under normal operating conditions.
NFR-002	The system shall support concurrent access by multiple authenticated users without affecting application performance.
NFR-003	All saved products shall be securely associated with the authenticated customer's account.
NFR-004	Customer data shall be transmitted and stored securely using industry-standard encryption practices.
NFR-005	The feature shall be compatible with the latest versions of major web browsers (Chrome, Edge, Firefox, and Safari).
NFR-006	The feature shall provide a responsive user interface for desktop, tablet, and mobile devices.
NFR-007	The system shall maintain high availability and ensure that saved products remain accessible whenever the application is operational.
NFR-008	Error messages displayed to users shall be clear, informative, and user-friendly without exposing internal system information.
NFR-009	The application shall automatically synchronize saved products across customer sessions after successful authentication.
NFR-010	The feature shall be scalable to support future enhancements such as shared wishlists, product recommendations, and price alerts without requiring major architectural changes.

9. GLOSSARY

For easy reference, enter any terms, abbreviations, and/or acronyms that you include in this document.

TERM/ABBREVIATION	EXPLANATION
BRD	Business Requirements Document that defines the business needs and objectives of the project.
FRD	Functional Requirements Document describing how the system will implement the business requirements.
MVP	Minimum Viable Product – the initial release containing only the essential functionality.
Save For Later	A feature that allows customers to save products for future purchase without adding them to the shopping cart.
Shopping Cart	A temporary collection of products selected by the customer for immediate purchase.
Customer	A registered user of the Online Grocery Delivery Platform.
Conversion Rate	The percentage of saved products that are eventually purchased by customers.
Product Catalog	The complete collection of products available on the platform.
Authentication	The process of verifying a customer's identity before allowing access to account-specific features.
Stakeholder	Any individual or group involved in, affected by, or responsible for the project.
Business Requirement	A high-level statement describing what the business needs to achieve.
Functional Requirement	A detailed description of what the system must do to satisfy a business requirement.
Non-Functional Requirement	A requirement that defines quality attributes such as performance, security, usability, and reliability.
